

Mahdi Javidi

Backend developer

☎ (+98) 9108304988 | ✉ mahdi.javidi.dev@gmail.com | 📷 mahdijz5 | 🌐 mahdijz5

Summary

Self-taught backend developer with 3+ years of experience building scalable, high-performance systems. Specialized in distributed and decentralized services, leveraging advanced concepts like clustering, event-driven programming, functional programming, and non-blocking I/O. Experienced in Web3 technologies, with a focus on blockchain integration and decentralized applications. Passionate about continuous learning, clean architecture, and improving system reliability.

Work Experience

PantoHealth

Germany

BACKEND ENGINEER (FULL-TIME)

March 2024 – Present

- **Engineered a real-time backend service** for monitoring pantograph systems on German railways, processing high-frequency sensor data through **RabbitMQ** with sub-second latency to cloud diagnostics.
- **Optimized MongoDB queries and resolved critical memory leaks** through comprehensive codebase analysis, achieving **30% performance improvement** and significantly enhancing application stability.
- **Implemented a fully responsive event-driven trigger service** to handle diverse application events, enabling flexible real-time alerting and anomaly detection workflows.
- **Established CI/CD pipelines** to automate testing and deployments, reducing release cycle time and minimizing production errors.
- **Deployed Prometheus monitoring** for comprehensive observability across server infrastructure, container health, and application performance metrics, enabling proactive issue detection in production.

Exmodule

Istanbul, Turkey

BACKEND ENGINEER (FULL-TIME)

April 2022 – March 2025

- **Developed over 8 backend projects** in collaboration with a **12-member team**, contributing to scalable, production-ready services used by thousands of users.
- **Gained expertise in building decentralized and distributed systems**, ensuring high availability and scalability. Designed **microservices-based** architectures that improved system uptime to **60%** while efficiently handling **millions of requests** per day.
- **Implemented Web3 authentication and authorization systems**, enabling secure wallet-based user access and smart contract permission management across multiple blockchain networks.
- **Engineered a fault-tolerant transaction processing system** using **BullMQ**, achieving **100% transaction handling reliability** across blockchain networks. Designed queuing mechanisms that **eliminated crypto transaction failures** and processed **over 100,000 blockchain transactions** monthly.
- **Built transaction listener services** for seamless **smart contract interactions**, enabling real-time blockchain event monitoring and automated transaction processing with **90% reliability**.

Skills

Programming Languages	Javascript, Typescript, Rust(basic)
Programming Paradigms	Object-oriented programming, Functional Programming
Frameworks	Express.js, NestJS
Testing	Jest, supertest
Tools	Git, GitLab, Jira, clickUp, Docker
Databases and ORMs	Mongodb, Mongoose, PostgreSQL, Typeorm, Redis
APIs	RESTful, GraphQL, Websocket, Grpc
Microservices	RabbitMQ, Kafka
Blockchain	Web3, Ether.js

Education

Sadjad University

Mashad, Iran
